For Immediate Release

Softlinx Releases an Upgrade to Replix dominoFAX for Lotus Notes/Domino

Westford, Mass. (June 10, 1998)—Softlinx, Inc., the leader in fax messaging integration with Lotus Notes and Domino, today announces the availability of Replix dominoFAX Version 4.2a. This comprehensive upgrade reinforces Softlinx' position in the market as the most transparent Notes fax messaging solution provider for the Lotus Notes and Domino environments.

"For years, Lotus Notes and Domino users have been searching for a fax product that not only reliably supports high volume faxing at the departmental level but also transparently integrates into the Notes environment," states Dr. Hikyu Lee, President and CEO, Softlinx, Inc. "We took their challenge and dedicated ourselves to setting the standard and developing a best-of-breed Notes fax solution. Replix dominoFAX Version 4.2a has met the demand with a product that provides the scalability, reliability and the manageability needed to move from departmental to enterprise wide fax messaging integration."

This latest release of Replix dominoFAX 4.2a delivers transparent fax integration by allowing users to send and receive faxes through the familiar Notes Mail interface. Replix dominoFAX 4.2a utilizes the Lotus Notes address book—but instead of just an e-mail alias for the fax address, users of Replix FaxMemo can now use the fax number field of a "Person Document" in the Notes Name and Address book to specify a fax destination. By simply clicking on "New Fax" vs. "New Message" they are able to send faxes as easily as sending an email message.

But Replix dominoFAX isn't just for Notes users. Replix dominoFAX also employs SMTP, so non-Notes users who use e-mail to send faxes can communicate with the Fax Server through the optional Mail to Fax Gateway. Replix dominoFAX 4.2a also supports legacy systems by providing foreign domain support. Users can address faxes using the Notes foreign domain addressing mechanism, such as "John Doe @ 978-555-1234 @ fax." This can be done with the standard Memo or FaxMemo form from Replix.

Replix dominoFAX now supports even more native files on the fax server. In addition to TIF, Microsoft Office and Lotus SmartSuite native files, it also supports BMP, JPG, PCX, DCX and XIF file types. Most importantly, Replix dominoFAX provides the only fax solution on the market that yields a high fidelity fax output for native Notes documents. By fully rasterizing all embedded graphics and other objects, Replix dominoFAX allows users to see the same high quality output as they would in a native Notes document. Embedded tables, check boxes and special fonts will be as clear and accurate as they are in the document.

Administrators will discover the most notable feature enhancements in Replix dominoFAX 4.2a. Enhanced billing options enable administrators to not only retrieve billing summary information

of all inbound and outbound faxes, but they are also able to limit these files by date and size. System administrators find this especially useful for the purpose of cross-charging costs to users and departments based upon actual usage. Based on customer feedback, Softlinx has also made enhancements in installation and administration procedures

Replix dominoFAX helps corporations by automating the fax process. Companies can quickly maximize personal productivity by incorporating fax as an electronic message type. By leveraging this with Least Cost Routing, corporations may significantly reduce fax communications costs and see a rapid return on investment.

Pricing and Availability

Currently Replix dominoFAX is fully scaleable and can be customized to fit the needs of any size corporation. To request a quote or place an order, call 1-800-899-7724 or 978-392-0001.
