Softlinx Announces Replix SDK for Linux and Java with ReplixFAX for Domino Version 6

ORLANDO, Fla., January 27, 2003 – Softlinx, Inc., the leader in enterprise fax messaging integration, today announces the release of Replix SDK for Java for its ReplixFAX for Domino product. The Replix SDK for Java provides the classes and interfaces to technology developers so that enterprise Java applications can be programmatically enhanced to include the ability to send and receive fax communications with the ReplixFAX messaging servers. The Replix SDK for Java is certified to support JVM Versions 1.1, 1.2, and 1.3. The Replix SDK for Java toolkit also includes HTML-based product documentation and code samples.

ReplixFAX for Domino offers powerful, Internet/Intranet fax messaging capabilities that not only ensures seamless interoperability with any application over the corporate network, but also provides integration of e-mail for companies constructing their unified messaging strategy. Outbound faxes can be sent directly from the Notes mail client, as well as faxed directly from backend applications. Inbound faxes are received, viewed, and managed directly in the recipient's Notes mail file.

"The development of a Java SDK supports Lotus' strategy to embrace the J2EE model and increases the collaboration features in a whole new class of applications.," states Hikyu Lee, CEO of Softlinx. "Many of our clients," continues Lee, "develop within the J2EE platform. They will benefit from our Java SDK and its flexibility to seamlessly automate document routing to their fax destinations from within their business applications."

ReplixFAX for Domino is available for Windows and Linux platforms. ReplixFAX for Domino with the Replix JAVA API toolkit bundle is currently available for prices starting at \$5,795.
