For Immediate Release

Softlinx Integrates ReplixFax and Stellent Content Server with eCopy ShareScan OP

The Connectors Allow Users to Scan Documents for Uninterrupted Faxing and Document Workflow

North Billerica, MA (June 10, 2006) –Softlinx Inc., an industry leader in fax and automated document delivery solutions announced today that it has entered into a development partnership with eCopy. Softlinx will leverage its premier partnerships of both eCopy and Stellent to develop *Stellent Connector for ShareScan OP* and *ReplixFax Connector for ShareScan OP*.

Built using the eCopy's ShareScan OP SDK, the *Stellent Connector for ShareScan OP* will extend the capabilities of digital copier or scanner to be a bridge between paper and Stellent digital workflows and allow Stellent UCM and iBPM users to scan any paper document directly into their Stellent repository and existing workflow. The *ReplixFax Connector for ShareScan OP* will enable any office worker to scan and fax documents from their eCopy equipped multi-function peripheral (MFP) devices in an uninterrupted manner.

“Now Stellent users can transform full color or black & white paper documents into electronic images that are easily shared and distributed using their Stellent ECM solution to improve and speed up their business processes through automated scan document workflow,” said Hikyu Lee, President at Softlinx. Dr. Lee added, “eCopy is the de facto standard for MFP’s today. Being a partner of both eCopy and Stellent, Softlinx is in a unique position to develop the solution connecting these two products. ”

“We are pleased to welcome Softlinx into the eCopy’s partner developer program,” said Peter Herz, director of business alliance for eCopy. “The integration of eCopy with Stellent UCM and iBPM will bridge the gap between the fast, electronic document workflow and the slow and costly paper-bound processes. Stellent enterprise content management (ECM) customers will benefit from these extended capabilities of their investment.”
